

Quarterly Safety Bulletin

July—September 2009

SAFE Program

Regulations

GSE

PROTECT YOUR POINTS

Always carry your valid drivers license when driving on the airfield. You will prevent a 4 point citation, which could result in losing your driving privileges.

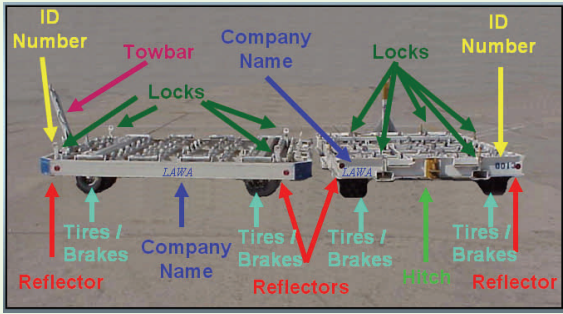

AIRFIELD MARKINGS

Roadway ZIPPER markings are in place to identify pathways for vehicle operations that cross taxiways. These "zipper" markings are located on all service roads that intersect taxiways. Use caution in these areas.

REDUCE GSE ACCIDENTS

Before towing any number of dollies, you must check the mechanical condition of each dolly. Pay special attention to hitch assemblies and tow bars. Also, make sure your cargo is secure. Inspection items should include the following:

Construction

You may have noticed that LAX is changing. There is lots of construction activity going on and the odds are good it will impact your operations. The dynamic environment at LAX can be intimidating and the addition of multiple construction projects can make it even more so. The best way to plan around construction is to know what activity is taking place. In an effort to keep our tenants informed about ongoing construction projects the Construction Coordination Office regularly updates the Airport Operations, Construction Activities webpage. The page can be found at:

[http://www.lawa.org/airops\\_construction.aspx](http://www.lawa.org/airops_construction.aspx) . We encourage you to frequently check these web pages for updated information regarding airport construction projects.

Quarterly Safety Tip:

*Please control FOD that attracts birds.*
